Security Audit – Friend3 Token Smart Contract

Version: 1.0 - Public Report

Date: Nov 17, 2023

ABBREVIATIONS

Name	Description		
Ethereum	An open source platform based on blockchain technology to create and distribute smart contracts and decentralized applications.		
Ether (ETH)	A cryptocurrency whose blockchain is generated by the Ethereum platform. Ether is used for payment of transactions and computing services in the Ethereum network.		
Smart contract	A computer protocol intended to digitally facilitate, verify or enforce the negotiation or performance of a contract.		
Solidity	A contract-oriented, high-level language for implementing smart contracts for the Ethereum platform.		
Solc	A compiler for Solidity.		
ERC20	ERC20 (BEP20 in Binance Smart Chain or xRP20 in other chains) tokens a blockchain-based assets that have value and can be sent and received. The primary difference with the primary coin is that instead of running on the own blockchain, ERC20 tokens are issued on a network that supports smart contracts such as Ethereum or Binance Smart Chain.		

Security Audit - Friend3 Token Smart Contract

Version: 1.0 - Public Report

Date: Nov 17, 2023

EXECUTIVE SUMMARY

This Security Audit Report was prepared by Verichains Lab on Nov 17, 2023. We would like to thank the Friend3 for trusting Verichains Lab in auditing smart contracts. Delivering high-quality audits is always our top priority.

This audit focused on identifying security flaws in code and the design of the Friend3 Token Smart Contract. The scope of the audit is limited to the source code files provided to Verichains. Verichains Lab completed the assessment using manual, static, and dynamic analysis techniques.

During the audit process, the audit team had identified no vulnerable issues in the smart contracts code.

Security Audit - Friend3 Token Smart Contract

Version: 1.0 - Public Report

Date: Nov 17, 2023

1. MANAGEMENT SUMMARY

1.1. About Friend3 Token Smart Contract

Friend3 is a leading social dApp where anyone can make friends and profits in Web3. On Friend3, content creators receive direct financial incentives, marking the seamless integration of the creator economy with Web3.

F3 functions as an ERC20 token within the Friend3 ecosystem, enabling users to engage seamlessly within its platform.

1.2. Audit scope

This audit focused on identifying security flaws in code and the design of the Friend3 Token Smart Contract.

The audited contract is the Friend3 Token Smart Contract that deployed on Binance Smart Chain Mainnet at address <code>0x9e57e83ad79ac5312ba82940ba037ed30600e167</code>. The details of the deployed smart contract are listed in Table 1.

FIELD	VALUE	
Contract Name	F3	
Contract Address	0x9e57e83ad79ac5312ba82940ba037ed30600e167	
Compiler Version	v0.8.20+commit.a1b79de6	
Optimization Enabled	No with 200 runs	
Explorer	https://bscscan.com/address/0x9e57e83ad79ac5312ba82940ba037ed30600e16	

Table 1. The deployed smart contract details

1.3. Audit methodology

Our security audit process for smart contract includes two steps:

Security Audit - Friend3 Token Smart Contract

Version: 1.0 - Public Report

Date: Nov 17, 2023

- Smart contract codes are scanned/tested for commonly known and more specific vulnerabilities using public and RK87, our in-house smart contract security analysis tool.
- Manual audit of the codes for security issues. The contracts are manually analyzed to look for any potential problems.

Following is the list of commonly known vulnerabilities that were considered during the audit of the smart contract:

- Integer Overflow and Underflow
- Timestamp Dependence
- Race Conditions
- Transaction-Ordering Dependence
- DoS with (Unexpected) revert
- DoS with Block Gas Limit
- Gas Usage, Gas Limit and Loops
- Redundant fallback function
- Unsafe type Inference
- Reentrancy
- Explicit visibility of functions state variables (external, internal, private and public)
- Logic Flaws

For vulnerabilities, we categorize the findings into categories as listed in table below, depending on their severity level:

SEVERITY LEVEL	DESCRIPTION
CRITICAL	A vulnerability that can disrupt the contract functioning; creates a critical risk to the contract; required to be fixed immediately.
HIGH	A vulnerability that could affect the desired outcome of executing the contract with high impact; needs to be fixed with high priority.
MEDIUM	A vulnerability that could affect the desired outcome of executing the contract with medium impact in a specific scenario; needs to be fixed.
LOW	An issue that does not have a significant impact, can be considered as less important.

Table 2. Severity levels

Security Audit - Friend3 Token Smart Contract

Version: 1.0 - Public Report

Date: Nov 17, 2023

1.4. Disclaimer

Friend3 acknowledges that the security services provided by Verichains, are conducted to the best of their professional abilities but cannot guarantee 100% coverage of all security vulnerabilities. Friend3 understands and accepts that despite rigorous auditing, certain vulnerabilities may remain undetected. Therefore, Friend3 agrees that Verichains shall not be held responsible or liable, and shall not be charged for any hacking incidents that occur due to security vulnerabilities not identified during the audit process.

1.5. Acceptance Minute

This final report served by Verichains to the Friend3 will be considered an Acceptance Minute. Within 7 (or 14) days, if no any further responses or reports is received from the Friend3, the final report will be considered fully accepted by the Friend3 without the signature.

Security Audit – Friend3 Token Smart Contract

Version: 1.0 - Public Report

Date: Nov 17, 2023

2. AUDIT RESULT

2.1. Overview

Table 3 lists some properties of the audited Friend3 Token Smart Contract (as of the report writing time).

PROPERTY	VALUE
Name	Friend3 Token
Symbol	F3
Decimals	18
Total Supply 1,000,000,000 (x10 ¹⁸) Note: the number of decimals is 18, so the total representation toker be 1,000,000,000 or 1 billion.	

Table 3. The Friend3 Token Smart Contract properties

2.2. Contract codes

The Friend3 Token Smart Contract was written in Solidity language, with the required version to be 0.8.20.

The contract only imported the ERC20 contract which was implemented by OpenZeppelin.

2.3. Findings

During the audit process, the audit team found no vulnerability in the given version of Friend3 Token Smart Contract.
