Security Audit – RageOnWheels Token Smart Contract

Version: 1.0 - Public Report

Date: Apr 10, 2023

ABBREVIATIONS

Name	Description	
Ethereum	An open source platform based on blockchain technology to create and distribute smart contracts and decentralized applications.	
Ether (ETH)	A cryptocurrency whose blockchain is generated by the Ethereum platform. Ether is used for payment of transactions and computing services in the Ethereum network.	
Smart contract	A computer protocol intended to digitally facilitate, verify or enforce negotiation or performance of a contract.	
Solidity	A contract-oriented, high-level language for implementing smart contracts for the Ethereum platform.	
Solc	A compiler for Solidity.	
ERC20	ERC20 (BEP20 in Binance Smart Chain or <i>x</i> RP20 in other chains) tokens are blockchain-based assets that have value and can be sent and received. The primary difference with the primary coin is that instead of running on their own blockchain, ERC20 tokens are issued on a network that supports smart contracts such as Ethereum or Binance Smart Chain.	

Security Audit – RageOnWheels Token Smart Contract

Version: 1.0 - Public Report

Date: Apr 10, 2023

EXECUTIVE SUMMARY

This Security Audit Report was prepared by Verichains Lab on Apr 10, 2023. We would like to thank the RageOnWheels for trusting Verichains Lab in auditing smart contracts. Delivering high-quality audits is always our top priority.

This audit focused on identifying security flaws in code and the design of the RageOnWheels Token Smart Contract. The scope of the audit is limited to the source code files provided to Verichains. Verichains Lab completed the assessment using manual, static, and dynamic analysis techniques.

During the audit process, the audit team had identified no vulnerable issue in the contract code.

Security Audit – RageOnWheels Token Smart Contract

Version: 1.0 - Public Report

Date: Apr 10, 2023

1. MANAGEMENT SUMMARY

1.1. About RageOnWheels Token Smart Contract

Rage on Wheels is the Play2Earn game you've been waiting for. Build an army of battle vehicles and ride them into battle, win tournaments, collect rewards in ROW tokens and even mine new cars. Become a feared leader in this dystopian world.

1.2. Audit scope

This audit focused on identifying security flaws in code and the design of the RageOnWheels Token Smart Contract.

The audited contract is the RageOnWheels Token Smart Contract that deployed on Binance Smart Chain Mainnet at address <code>0x026db614f070cb4c7e421da22df84ea1021236eb</code>. The details of the deployed smart contract are listed in Table 1.

FIELD	VALUE
Contract Name	RageOnWheels
Contract Address	0x026db614f070cb4c7e421da22df84ea1021236eb
Compiler Version	v0.8.19+commit.7dd6d404
Optimization Enabled	Yes with 200 runs
Explorer	https://bscscan.com/address/0x026db614f070cb4c7e421da22df84ea1021236eb

Table 1. The deployed smart contract details

1.3. Audit methodology

Our security audit process for smart contract includes two steps:

- Smart contract codes are scanned/tested for commonly known and more specific vulnerabilities using public and RK87, our in-house smart contract security analysis tool.
- Manual audit of the codes for security issues. The contracts are manually analyzed to look for any potential problems.

Security Audit – RageOnWheels Token Smart Contract

Version: 1.0 - Public Report

Date: Apr 10, 2023

Following is the list of commonly known vulnerabilities that were considered during the audit of the smart contract:

- Integer Overflow and Underflow
- Timestamp Dependence
- Race Conditions
- Transaction-Ordering Dependence
- DoS with (Unexpected) revert
- DoS with Block Gas Limit
- Gas Usage, Gas Limit and Loops
- Redundant fallback function
- Unsafe type Inference
- Reentrancy
- Explicit visibility of functions state variables (external, internal, private and public)
- Logic Flaws

For vulnerabilities, we categorize the findings into categories as listed in table below, depending on their severity level:

SEVERITY LEVEL	ESCRIPTION	
CRITICAL	A vulnerability that can disrupt the contract functioning; creates a critical risk to the contract; required to be fixed immediately.	
HIGH	A vulnerability that could affect the desired outcome of executing the contract with high impact; needs to be fixed with high priority.	
MEDIUM	A vulnerability that could affect the desired outcome of executing the contract with medium impact in a specific scenario; needs to be fixed.	
LOW	An issue that does not have a significant impact, can be considered as less important.	

Table 2. Severity levels

1.4. Disclaimer

Please note that security auditing cannot uncover all existing vulnerabilities, and even an audit in which no vulnerabilities are found is not a guarantee for a 100% secure smart contract. However, auditing allows discovering vulnerabilities that were unobserved, overlooked during development and areas where additional security measures are necessary.

Security Audit – RageOnWheels Token Smart Contract

Version: 1.0 - Public Report

Date: Apr 10, 2023

2. AUDIT RESULT

2.1. Overview

The RageOnWheels Token Smart Contract was written in Solidity language, with the required version to be ^0.8.19. The source code was written based on OpenZeppelin's library.

2.1.1. row-token.sol

RageOnWheels Token Smart Contract extend ERC20 contract. During deployment, a certain amount of supply will be minted to the holder address. Users can transfer tokens to multiple wallets at once using the transferMultiple() function.

2.2. Findings

During the audit process, the audit team found no vulnerability in the given version of RageOnWheels Token Smart Contract.
